Title : **The Asian tsunami : an urgent case for improved government information systems and management.**

Publication : 2007.

Citation: Disaster Prevention and Management: an International Journal, Vol.16(2), pp.188-200.

Summary: Abstract: Purpose - This paper seeks to provide a timely consideration of how regional governments in Asia and other national governments around the world collect, manage, and share critical geo-technical information in what is becoming an increasingly global community. Design/methodology/approach - The paper addresses the socio-technical perspective of government information systems and management, and draws on the collection and analysis of several public reports, media articles, and expert opinions published in the aftermath of the Asian tsunami of 26 December 2004.

Title : **December 26, 2004 Sumatra earthquake and tsunami.**

Publication : 2004

Citation: Risk Frontiers, Vol.4 No.3, March 2005, pp.1-3

Summary: Currently assessed as moment magnitude (Mw) 9.0, the Sumatra earthquake ranks as one of the largest of the past hundred years and was felt as far away as Bangladesh. A similar mega-thrust event off British Columbia and resulting losses to communities along the Pacific Northwest and Japan could have disastrous consequences for the insurance industry and so it is important to learn what we can from this most recent event.

Title : **The delivery of essential humanitarian services after the tsunami in Aceh, Indonesia.**

Publication : 2006.

Citation: Journal of Emergency Management, Vol.4, No.4, 2006, pp.43-50.

Summary: A survey of 478 Indonesian households displaced by the tsunami was conducted in two districts in Aceh Province in late March and early April 2005. Essential services (shelter, water, food, health services) were provided to approximately half of internally displaced persons (IDPs) within seven days of the tsunami, and this figure rose to around 70 percent within two weeks of the tsunami. Essential services reached significantly greater proportions of the tsunami-displaced population in Aceh Besar than Banda Aceh at both two and four weeks post-tsunami. The majority of IDPs reported satisfaction with essential services other than food increased by four weeks after the tsunami. Of IDP households surveyed, the vast majority reported that there were services they would have liked to receive but did not, both in the month following the tsunami and at the time of the survey.

INDIAN OCEAN TSUNAMI

Author : Torres, John Albert.

Title : **Disaster in the Indian Ocean : tsunami 2004 / John A. Torres.**

Publication : Hockessin, Del. : Mitchell Lane Publishers, c2005.

Physical Description: 48 p. :col. ill., col. maps ;24 cm.

Series: Monumental milestones.Great events of modern times

Bibliography: Includes bibliographical references and index.

Contents: The ocean moved -- Aftermath -- The world responds -- Hope and miracles -- What's next?

Summary: The disaster in the Indian Ocean started with a massive undersea earthquake off the coast of Indonesia. What followed was a surge of water called a tsunami that killed thousands of people in nearly a dozen countries. Water rose up miles inland and destroyed everything in its path. Children were ripped from their parents' arms, husbands and wives were lost to each other forever. This is their story. But more importantly, this is a story of hope, of how people woke up to destroyed cities and missing children and did not give up. They showed what they were made of by licking their wounds and then trying to find their lives again. This is also the story of how the world responded with the biggest humanitarian effort in history. Countries from all over the world sent money, food, water, soldiers, and doctors. Nothing like this has ever happened in our world before, and although the world responded in a big way, hopefully it will never happen again.

INDIAN OCEAN TSUNAMI

Title : **Great tsunami : 26 December, 2004, Sumatra region / Geological Society of India.**

Publication : Bangalore : Geological Society of India, 2005.

Physical Description: vii, 142 p. :col. ill., col. map ;25 cm.

Series: Memoir / Geological Society of India ;64

Note : "This publication has been made possible through a grant from the Dept. of Science and Technology, Govt. of India, New Delhi."

Bibliography: Includes bibliographical references.

Contents: Source parameters of the Sumatra earthquake (2004) -- Tectonics and seismicity of Andaman-Sunda arc -- Tsunami impact -- Macroseismic survey and isoseismals -- Foreshock and aftershock activity -- Strong ground motion data analysis -- Engineering aspects of damages to built environment (Andaman-Nicobar islands and mainland) -- Deformation studies in Andaman and Nicobar Islands -- Other collateral studies supported by Dept. of Science and Technology.

Summary: This book describes the 2004 Indian Ocean Tsunami from a scientific viewpoint, using both engineering and seismic disciplines, incorporating a history of the region. It then goes on to list some of the research being undertaken post-tsunami, which is funded by the government of India. It also gives some recommendations and conclusions.

Title : **The impact will last decades.**

Publication : 2005

Citation: New Scientist, No.2482 15 January 2005, pp.14-15

Summary: Three weeks on from the tsunami that battered 12 Asian countries, the extent of the destruction is well documented. But as families, aid agencies and governments struggle to repair shattered lives, it is clear that the waves have redrawn more than coastlines. Settlements in the worst affected regions will be transformed and the survivors will be dealing with the fallout for years or decades to come.

Title : **Indonesia.**

Publication : 2005.

Citation: Focus, Vol.20(2), March 2005, pp.17-19.

Summary: Of all the countries so savagely battered by the tsunami, the northern parts of Indonesia suffered most. Like so many others in the world, Australians were shocked at the extent of the destruction and responded immediately. By the end of January 2005, Australia had sent 1,036 tonnes of humanitarian aid. As Australia's relief effort continues in northern Sumatra, water and sanitation are high priorities. Given the trauma thousands have suffered, concerns about health are uppermost.

INDIAN OCEAN TSUNAMI

Author : Lyall, Kimina.

Title : Out of the blue : facing the tsunami / Kimina Lyall.

Publication : Sydney : ABC Books for the Australian Broadcasting Corporation, 2006.

Physical Description: xxi, 265 p. :ill., maps, ports. ;24 cm.

Summary: "When journalist Kimina Lyall was offered the coveted post of Southeast Asia correspondent for the 'Australian' newspaper, she jumped at the chance. Based in Bangkok, she was captivated by the diversity and vibrancy of the region, from the bustling energy of Vietnam to the mystery of Burma. Then a violent incident on a deserted beach left her vulnerable and traumatised. Under pressure to deliver scoops and exclusives, Kimina was constantly on the move, chasing suspected terrorists and accused paedophiles from Cambodia to the jungles of the southern Philippines. She was giving the newspaper editors the kind of stories they liked - but she wasn't coping. Determined to make peace with the country and its beaches, Kimina and her partner decided to build a house on Golden Buddha Beach, off Thailand's west coast. But on Boxing Day 2004, a rupture in the earth's crust 696 kilometres from their peaceful paradise triggered a tsunami that swept across the Indian Ocean. 'It hit our ears first. A roar, louder than an ascending jet, broke the blue and froze us all into stunned silence ... Way out to sea, impossibly far, a cloud of white water forming.' Killing hundreds of thousands of people in eighteen countries, and leaving its millions survivors with little more than nothing, the tsunami was on of the most destructive natural disasters in history - and instead of just reporting on it, Kimina was living through it." -- BOOK JACKET.
