Title : **Australian action plan for pandemic influenza**

Publication : Australia : National Health partnership, [2004].

Physical Description: 14 p. ;30 cm.

Summary: The Australian Action plan for Pandemic Influenza (the action plan) specifically targets Australian Government, State and Territory Governments, their agencies and emergency services. It provides direction for the development of actions at the Australian Government, State and Territory and local level and is cognisant of

PANDEMIC

specific advice and policy requirements that will be necessary to ensure that Australia is prepared. In addition, the Action plan should provide guidance to health service providers and other groups at local level whose services may be critically important during the interpandemic period and to provide information to facilitate an organised and effective response.

Title : **Being prepared for a human influenza pandemic : : a business continuity guide for Australian businesses.**

Publication : [Canberra] : Department of Industry, Tourism and Resources], c2006.

Physical Description: iv, 63 p. ;30 cm.

Note : Cover title.

"An Australian Government initiative" - cover.

Includes posters in back cover : Cough etiquette and respiratory hygiene -- How to wash and dry hands -- How to clean hands using an alcohol-based liquid or hand rub -- How to fit and remove protective gloves -- How to fit and remove a surgical mask -- Travel health : have you recently arrived or returned from overseas? -- Staff influenza notice.

Summary: "This guide has been developed to help Australian businesses consider what impact a human influenza pandemic might have on their business, and to help businesses take appropriate actions to prepare themselves as best they can. Although the Government can assist in providing access to information and planning tools, it is up to businesses themselves to prepare and ensure they are in the best position to manage the effects of a pandemic, and to recover as quickly as possible." -- p. 2.

PANDEMIC

Shelf Location: JOURNAL CITATION

Author : Bielajs, Ingrid

Title : **Development of prehospital, population-based triage-management protocols for pandemics [article]**

Publication : 2008.

Citation: Prehospital and Disaster Medicine, Vol. 23, No. 5, September-October 2008, pp. 420-430.

Summary: Abstract: The lack of disease-specific triage-management protocols that address the unique aspects of a pandemic places emergency medical services, and specifically, emergency medical services practitioners, at great risk. Without adequate protocols, the emergency health system will risk needless exposure, loss of functional capacity, and inappropriately triaged patients. This paper reports on the development of population-based triage-management protocols at two patient points of contact. The primary objective of the triage-management protocols is to identify patients infected by or exposed to the biological agent, and consequently, appropriately triage patients so as to optimize the utilization of emergency medical services and surge capacity resources through disposition and care at hospital- and non-hospital-based care facilities. Protocols must include standardized ?flu questions?and a Fear and Resiliency Checklist to ensure protection and separation of the susceptible population from those infected or exposed.

Title : **Epidemic and bioterrorism preparation among emergency medical services systems. [article]**

Publication : 2007.

Citation: PreHospital and Disaster Medicine, Vol.22 (3) May-June 2007, pp.237-242.

Summary: Introduction: The purpose of this research was to determine the preparedness of emergency medical services (EMS) agencies in one US state to cope with a epidemic event. Methods: Data were collected primarily through telephone interviews with EMS officials throughout the State. To provide a comparison, nine out-of state emergency services agencies were invited to participate. Results: Emergency medical services agencies from nine of the 23 counties (39%) provided responses to some or all of the questions in the telephone survey. Seven of the nine out-of-state agencies provided responses to the survey. Most of the EMS agencies do not have broad, formal plans for response to large-scale bio-terrorist or pandemic events. Conclusions: The findings indicate that EMS agencies in this state fundamentally are unprepared for a large-scale bioterrorism or pandemic event. The few existing plans rely heavily on mutual aid from agencies that may be incapable of providing such aid. Therefore, EMS agencies must be prepared to manage a response to these incidents without assistance from any agencies outside of their local community. In order to accomplish this, they must begin planning and develop close working relationships with public health, healthcare, and elected officials within their local communities.massive

Title : **Exercise Cumpston 06 : report / Office of Health Protection, Australian Government Dept. of Health and Ageing.**

Publication : [Canberra, A.C.T.] : Dept. of Health and Ageing, [2007].

Physical Description: viii, 72 p.

Note : At head of title: National pandemic influenza exercise.

Contents: Foreward - List of acronyms - 1.Executive summary - 2.Aims and objective - 3.Current preparedness and planning - 4.Exercise activities - 5.Exercise outcomes - 6.Exercise lessons learned - 7.Conclusion.

Summary: Exercise Cumpston 06 was the first major event of its kind conducted by the Department of Health and Ageing. The aim was to exercise the capacity and capability of the Australian health system to prevent, detect and respond to an influenza pandemic. The methodology employed was to create a simulated pandemic situation to assess and strengthen Australia's preparedness planning, publicly demonstrate the response capability of the health system, enhance the interoperability of jurisdictional response arrangements and contribute to global preparedness.

Title : **A future pandemic. [article]**

Publication : 2005.

Citation: Risk Frontiers, Vol.5(2), December 2005, pp.1-3.

Summary: It is difficult to pick up a paper or watch television today without seeing some reference to bird flu, H5N1, or a possible influenza pandemic and world's lack of preparedness for it. One thing seems clear: in an increasingly interconnected world, where 1.5 billion people cross international borders by air every year, a virus could circle the globe very rapidly, possibly even before it was detected. In contrast, the so-called 1918-19 'Spanish Influenza' took some 18 months to circle the globe and about four to six months to do its damage in any one country. This article examines some implications of such an event for the life insurance business and the wider economy.

: 2nd. edition.

Publication : Edinburgh, Eng. : Mosby/Elsevier, 2006.

Physical Description: x, 240 p. :ill. ;19 cm.

Series: Rapid reference

Summary: The ongoing threat of pandemic influenza is very serious indeed as evidenced by recent articles within The Lancet and The Lancet Infectious Disease. This title provides the reader with authoritative and accessible information on the subject of influenza. Clearly written by key experts in the field and highly illustrated in full colour, the book provides an overview of influenza, its pathogenesis, epidemiology, the burden of disease and its health economics. Rapid Reference Influenza also summarises available information on the molecular biology of influenza and the emergence of new influenza viruses. Completely updated with the latest information on H5N1, the book aims to contribute to international efforts to emphasize the major burden of influenza and the need for better control.

Title : **Influenza surveillance within hospitals : what is the world doing?**

Publication : 2007.

Citation: Communicable Diseases Intelligence, Vol.31 (4) December 2007, pp.413 - 418.

Summary: Influenza within hospitals is receiving increasing attention as a result of planning for an influenza pandemic and the magnitude and severity of the 2007 influenza season in Australia. This article reviews current approaches to influenza surveillance of admitted patients, as opposed to surveillance of emergency departments, in hospitals internationally. Most examples came from the United States of America and Canada, although systems have been described in the United Kingdom and Japan. In-hospital surveillance of influenza occurs within broader surveillance systems established by national governments, and through other systems established by sub-national governments and individual hospitals. Systems vary in focus, i.e. laboratory confirmed influenza or influenza-like illness, and some are labour intensive while others incorporate differing degrees of automation. The approach to influenza surveillance within hospitals will depend on objectives and available resources, although an automated approach is likely to have greater longevity as labour requirements are reduced.

Note : A downloadable version of this report is available at bookstore.icma.org, item no. 43445.

Bibliography: Includes bibliographical references (p.14-15).

Contents: Should we be concerned about pandemic influenza? -- The federal perspective -- Local initiatives -- Lessons for smaller communities -- Planning and exercises at the federal level -- Wrap-up -- References.

Summary: This report discusses the pandemic influenza risk and presents a prudent planning strategy. Case studies from Santa Clara County, California, and Hillsborough County, Florida, illustrate approaches to planning and suggest lessons for jurisdictions of all sizes, including small towns. A planning exercise carried out by the Centers for Disease Control also offers insight for larger local governments. The best countermeasure? a vaccine? may not be available during the first wave of a pandemic influenza. Therefore, a targeted, layered plan for community action is needed when a pandemic first appears if local authorities are to control the spread of illness and avoid breakdown of community health service systems. Elements of an effective plan will include legal as well as health guidelines, and a strategy for enlisting the cooperation of citizens in commonsense actions that will slow the spread of disease and preserve the social and economic health, as well as the physical health, of the community.

Title : **Preparing for pandemic influenza : adapting a model of healthcare facility preparedness to the business sector.**

Publication : 2007.

Citation: Journal of Business Continuity and Emergency Planning, Vol.2 (1) October 2007, pp.48 - 57.

PANDEMIC

Summary: With concerns that another influenza pandemic is drawing near, viral strains of which might be circulating across wild bird populations in Asia, North Africa and Europe at the present time, the business sector has begun to focus attention on the steps required to prepare for such an eventuality. This paper elucidates the translation of an 'all-hazards' healthcare sector model established in the wake of response to the significant terrorist events in the autumn of 2001 for use in the business setting. The model is based upon the identification and promotion of strong leadership, implementation of sound infection control and occupational health and safety measures, development of a comprehensive training and education programme, and the proactive institution of business recovery practices.

Author : Sikich, Geary W.

Title : **Protecting your business in a pandemic : : plans, tools, and advice for maintaining business continuity / Geary W. Sikich ; foreword by Charles P. Carey.**

Publication : Westport, Conn. : Praeger, 2008.

Physical Description: xvi, 224 p. :ill. ;25 cm.

Bibliography: Includes bibliographical references (p. [213]-217) and index.

Contents: A call to action: the danger of H5N1 -- The first wave : pandemic surprise -- The pandemic settles in -- Global reaction to a pandemic -- The danger of reassortment -- After the shock : potential risks for the global economy -- Paradigm shifts : socioeconomic and market ramifications -- Tick, tick, tick : geopolitical impacts of a pandemic.

Summary: "A pandemic is an epidemic that covers a huge swath of the country or even the world. And it's just as scary as it sounds. For example, it's estimated that up to a third of the U.S. population could fall ill in an Avian flu pandemic, costing the U.S. economy alone up to \$675 billion. Worse, pandemics shatter lives and businesses and tend to rock society to its foundations. But humanity has been through pandemics before. As disaster-management and business-continuity expert Geary Sikich shows in this book, there are ways to make the best of a bad situation. These methods improve the chance that businesses will remain resilient, and people healthy, employed, and productive - even in the darkest days of an international disaster. Protecting Your Business in a Pandemic helps managers and owners understand the threat pandemics pose to society, the overall economy, and their businesses."--BOOK JACKET.

Title : **Public behaviour during a pandemic**

Publication : 2008.

Citation: Australian Journal of Emergency Management, Vol.23 (3) August 2008, pp.35 - 40.

PANDEMIC

Summary: A pandemic resulting from a newly emerged disease constitutes one of the more probable events likely to threaten national security (Cecchine and Moore, 2006, Brower and Chalk, 2003). Like many countries, Australia is currently taking steps to improve its ability to manage an outbreak of pandemic. An important component of these efforts to date is Exercise Cumpston¹, a multi-jurisdictional exercise held in October 2006. Exercise Cumpston provided State and Federal Government agencies an opportunity to validate elements of their pandemic influenza management plans. Moreover, it offered us a means by which to test and, if necessary, refine the inter-departmental coordination processes so critical to the effectiveness of any response.

Title : **Strategic pandemic planning**

Publication : 2006.

Citation: The Business Continuity Journal, Vol.1 (1) 2006, pp.21 - 29.

Summary: This paper commences with a detailed exploration of the common assumptions that are made concerning the onset and impacts of pandemic influenza. The author points out that the tacit acceptance of such assumptions can lead to limited and unrealistic views of both the pandemic threat and the capacity of business and governments to respond. Building pandemic plans around potentially false assumptions can and does, lead to misappropriation of critical resources, states the author. The paper then moves on to look at 'pandemic preparation as a special case of business continuity'. There are three aspects of pandemics which create particular issues for business continuity managers: pandemics are: global; simultaneously disruptive; and prolonged. Also, pandemics threaten people directly, and other aspects of the business only indirectly, requiring a different approach than taken in many business continuity programs. With pandemic preparation, the cost is primarily the investment in research, planning and training. As such, the costs are generally much lower and the benefits accrue continuously. Strategically approached, pandemic preparation can provide opportunities in industry leadership, and can open new avenues of business.
